Term Project Proposal – Team 1

Name: Srikanth Munaga (700742680)

Name: Vikram Dingari (700742014)

Description: Out project is to develop a single page banking application that facilitates the basic banking needs of a customer. This Application targets Business and consumer customers (each will have different UI experience based on the logged in customer type). This application consists of accounts , Transfers, statements (Tax Statements and Transactions), graph or charts of investments and expenses (based on the customer previous data) and deals specific to the customer all in a single web page instead of navigating to the different screen or tab.

Instead of using data base for storage we will achieve it by using excel sheets client side itself (we will code in such a way that later we can just simply attach database layer to this).

Key Features:

1) Documents Generated dynamically (Tax and Transactions)

2) Graphs or charts (by analysing the customer transactions and activities)

3) send money (we will take it up to API layer and return success message)

4) Using Excel sheets for data storage

5) will work on it and add more…

Sample Prototype:
